

Professional GIS Study Area Maps — Research & Publication Portfolio

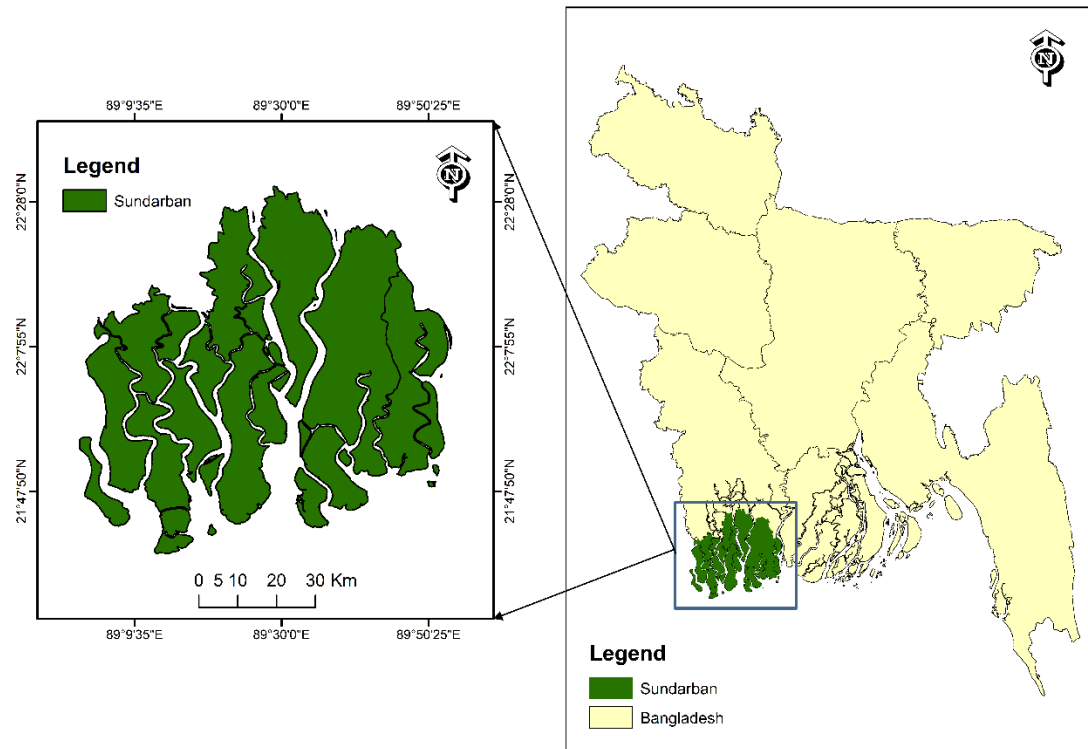

This portfolio presents a selection of professionally designed study area maps created using GIS and cartographic techniques for academic and research purposes. The maps demonstrate clear spatial visualization, accurate geographic representation, professional layouts, appropriate labeling, and high-resolution presentation.

The maps are suitable for research papers, journal articles, theses, dissertations, academic reports, project documentation, and scientific publications. Depending on the project requirements, maps may include study area boundaries, administrative units, roads, rivers, sampling locations, important features, location maps, legends, scale bars, north arrows, and other relevant spatial information.

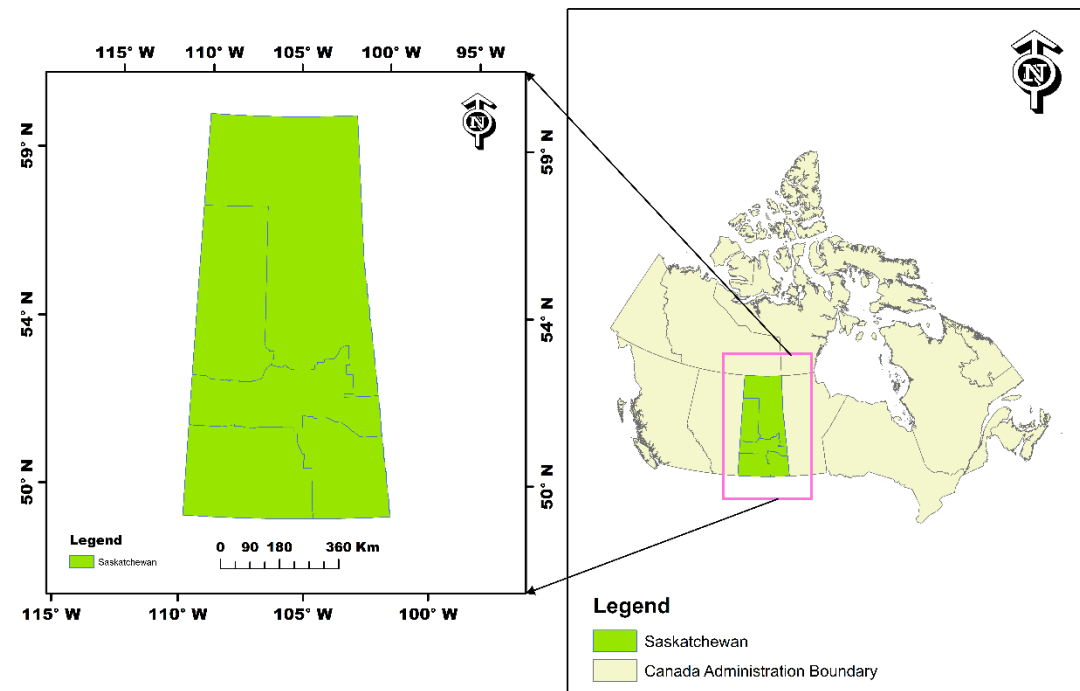

Each map is designed with a focus on clarity, accuracy, visual quality, and research-ready presentation.

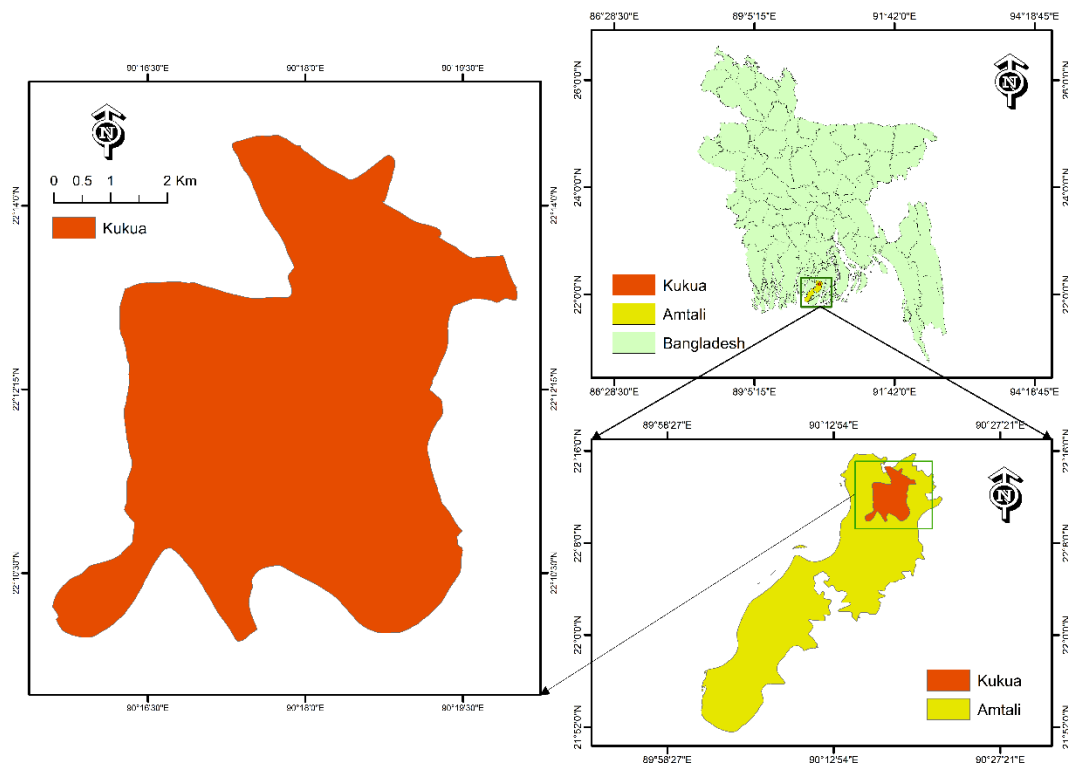

The Bangladesh Sundarbans Coastal Forest Region

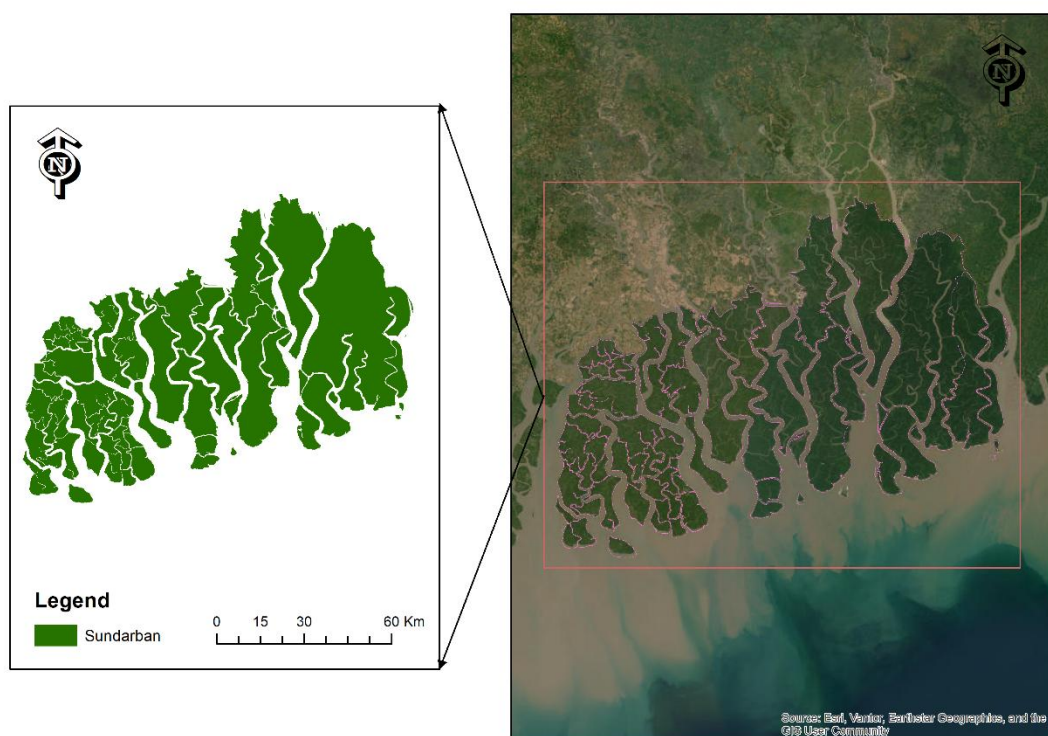

Study Area Map: Saskatchewan

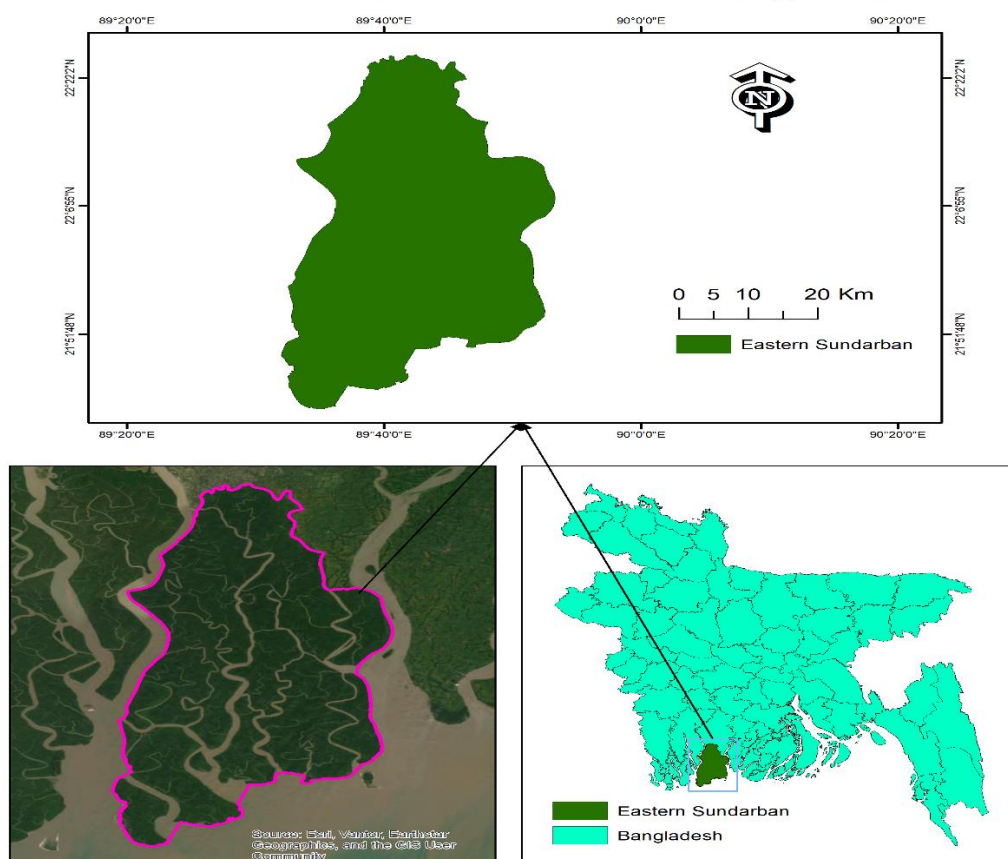

Study Area Map of Kukua Union
